SecureWAN

Enterprise Security for SMBs delivered at the ISP level

Powered by Sophos, SecureWAN leverages Next Generation Firewall technology to centrally protect WAN connections from attacks at the ISP level before they get to the customer's edge.

SOPHOS
Cybersecurity delivered.

From SMB clients with a single site, all the way up to large enterprises with multiple branches, centrally protect all of your clients sites with centralised security at the ISP level before threats get to the customer's edge, providing an extra layer of security for the ideal multi-layered security stack.

- Designed to be a simple add-on with any Hosted Network WAN, Infrastructure and Desktop as a Service
- Protects single or multiple sites
- No changes to onsite equipment needed
- Clear visibility into network usage and potential threats
- Available as a managed or unmanaged offering
- On-demand scaling to suit businesses of all sizes

Powerful Protection
See it. Stop it. Secure it.

Our comprehensive next-generation firewall protection has been built to expose hidden risks, block both known and unknown threats and automatically respond to incidents.

Exposes hidden Risks

Superior visibility into unknown applications, risky activity, suspicious traffic and advanced threats helps you regain control of your network and get deeper insights.

Block unknown threats

Powerful next-gen protection technologies like deep learning and intrusion prevention keep your organisation secure from the latest hacks and attacks.

Automatically responds to incidents

Synchronised Security automatic threat response instantly identifies and isolates compromised systems on your network to prevent breaches and lateral movement.

Central Reporting
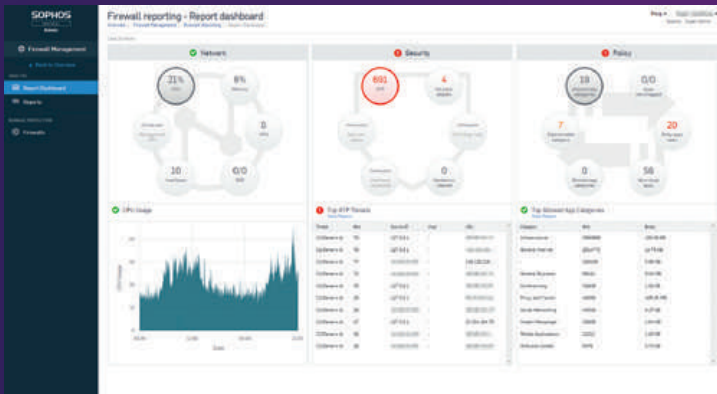

Central reporting is available at no extra cost for the storage of up to 7 days of report data. Premium options with longer data retention and additional features are available for purchase.

Firewall reporting in the cloud

Sophos Central includes powerful reporting tools that enable you to visualise your network, web application activity and security over time. You get a flexible reporting experience that combines a variety of built-in reports with powerful tools to create your own custom reports, enabling you to report what you want how you want.

- Increase your visibility into network activity through analytics
- Analyse data to identify security gaps, suspicious use behavior or other events requiring policy changes
- Use the pre-defined modules or customise each report for specific use cases
